Quantum-Enhanced Secure Communication via One-Time Pad and Key Distribution

Jan 2025 - May 2025

- Developed a quantum-secure communication simulator with a Python-based GUI, implementing Quantum Key Distribution and One-Time Pad encryption to demonstrate advanced, cloud-ready data security solutionsby using AWS Bracket Quantum computing.
- GitHub: [Quantum Project](#)
- Implemented a highly secure communication system using quantum key distribution (QKD) and one-time pad encryption. Simulated quantum key exchange using Qiskit and integrated cryptographically secure OTP algorithms to ensure unbreakable end-to-end encryption. Demonstrated advanced cybersecurity principles with AI and practical applications of quantum computing for next-gen secure data transmission.
